**Subject: Actuary's Certification of the Actuarial Valuation as of August 31, 2005**

We certify that the information included herein and contained in the 2005 Actuarial Valuation Report is accurate and fairly presents the actuarial position of the Teacher Retirement System of Texas (TRS) as of August 31, 2005.

All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, the results presented comply with the requirements of the Texas statutes and, where applicable, the Internal Revenue Code, ERISA, and the Statements of the Governmental Accounting Standards Board. The undersigned are independent actuaries. Mr. Carter and Mr. Newton are members of the American Academy of Actuaries, and are also Enrolled Actuaries. All are experienced in performing valuations for large public retirement systems.

***Actuarial Valuations***

The primary purpose of the valuation report is to determine the adequacy of the current State contribution rate through measuring the resulting funding period, to describe the current financial condition of the System, and to analyze changes in the System's condition. In addition, the report provides information required by the System in connection with Governmental Accounting Standards Board Statement No. 25 (GASB No. 25), and it provides various summaries of the data.

Valuations are prepared annually, as of August 31 of each year, the last day of the System's plan and fiscal year.

***Financing Objective of the Plan***

Contribution rates are established by Law that, over time, are intended to remain level as a percent of payroll. The employee and State contribution rates have been set by Law and are intended to provide for the normal cost plus the level percentage of payroll required to amortize the unfunded actuarial accrued liability over a period not in excess of 31 years.

***Progress Toward Realization of Financing Objective***

The actuarial accrued liability, the unfunded actuarial accrued liability (UAAL), and the calculation of the resulting funding period illustrate the progress toward the realization of financing objectives. Based on this actuarial valuation as of August 31, 2005, the System's under-funded status has increased because of the continued recognition of the investment results during the poor investment market of fiscal years 2001 & 2002, and the UAAL is now \$13.2 billion.

This valuation shows a normal cost equal to 10.40% of pay. Since the State contribution rate of 6.00% of pay plus the member contribution rate of 6.40% of pay total 12.40% of pay, there is 2.00% of pay available to amortize the UAAL. However, the contributions provided by this portion of the contribution rate are not sufficient to amortize the current unfunded actuarial accrued liabilities of the System. Therefore the funding period corresponding to the 6.00% State contribution rate is "never" or infinite, which is greater than the statutory limit of 31 years.

The actuarial valuation report as of August 31, 2005 reveals that while the System has an unfunded liability, it still has a funded ratio (the ratio of actuarial assets to actuarial accrued liability) of 87.1%. In addition, the System is now deferring a net asset gain from prior asset experience. Therefore, in the absence of actuarial losses in the future, the funded status of the System should improve as these deferred asset gains are recognized.

Even though the System earned a 14.4% return on a market value of assets basis for the plan year ending August 31, 2005, the System experienced a \$4.1 billion loss on the actuarial value of assets due to the recognition of prior investment losses. However, the System has now moved into a position where the actuarial value of assets is less than the market value, as a result of deferred net asset gains. As long as there are no offsetting asset losses over the next few years, the System is expected to recognize \$4.4 billion in asset gains. The recognition of these asset gains and the change in the benefit provisions enacted by the legislature during the last session could put the System back into an actuarial position that would produce a more reasonable funding period.

In the absence of significant actuarial losses over the near term, the contribution rate needed to amortize the UAAL will begin to decrease. If the System can earn 8% over the next four years, the required contribution rate is forecasted to flatten out between 6.00% and 6.20%. This current contribution rate may still be lower than the amount needed to fund the normal cost and amortize the UAAL over the 30-year period called for by GASB Statement No. 25, but it would at least produce a determinable funding period and put the System in a position where one or two years of above average investment returns (9%-10%) could lower the GASB ARC to below the statutory 6.0% contribution rate.

Even though the future outlook has improved significantly since the prior valuation, caution is still warranted over the next few years. There should be no benefit increases passed by the Legislature over

the next several Legislative Sessions without adequate funding, and the funded status should be carefully monitored.

***Plan Provisions***

The plan provisions used in the actuarial valuation are described in Table 20 of the valuation report. This valuation reflects the changes to plan provisions as enacted by the 79<sup>th</sup> Texas Legislature.

Legislation was adopted by the legislature since the prior valuation. This legislation changed the benefit provisions as follows:

1. Non-grandfathered members will be subject to the following new law changes effective September 1, 2005:
  - (i) final average salary at retirement will be determined by the highest five years (instead of three years) of salary,
  - (ii) subsidized early retirement for members at least age 55 and with at least 20 years of service will be eliminated, and
  - (iii) the partial lump sum option eligibility will require a combined age plus years of creditable service that equals at least 90 ("Rule of 90").
2. If a member meets any one of the following criteria on or before August 31, 2005, they are grandfathered (exempt) from the above changes:
  - (i) at least 50 years old, or
  - (ii) age and service credit equal at least 70 ("Rule of 70"), or
  - (iii) have at least 25 years of service credit.
3. Effective January 1, 2006, new members must pay the full actuarial cost for service purchases for out of state service.
4. New members who enter TRS after August 31, 2007 are also affected by the following changes:
  - (i) minimum age 60 for unreduced retirement, and
  - (ii) reduced retirement at Rule of 80, benefit reduced 5% a year from age 60.

***Disclosure of Pension Information***

Effective for the fiscal year ending August 31, 1996, the Board of Trustees has adopted compliance with the requirements of Governmental Accounting Standards Board (GASB) Statement No. 25.

### ***Actuarial Methods and Assumptions***

The actuarial methods and assumptions have been selected by the Board of Trustees of the Teacher Retirement System of Texas based upon our analysis and recommendations. These assumptions and methods are detailed in Table 21 of the valuation report. The Board of Trustees has sole authority to determine the actuarial assumptions used for the plan. The actuarial methods and assumptions are based on a study of actual experience for the four year period ending August 31, 2003 and were adopted on May 21, 2004.

The results of the actuarial valuation are dependent on the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rates and funding periods. The actuarial calculations are intended to provide information for rational decision making.

In our opinion, the actuarial assumptions used are appropriate for purposes of the valuation and are internally consistent and reasonably related to the experience of the System and to reasonable expectations. The actuarial assumptions and methods used in this report comply with the parameters for disclosure that appear in GASB 25.

### ***Data***

In preparing the August 31, 2005 actuarial valuation, we have relied upon member and asset data provided by the Teacher Retirement System of Texas. We have not subjected this data to any auditing procedures, but have examined the data for reasonableness and for consistency with prior years' data. In conjunction with the actuarial audit performed since the prior valuation, certain miscellaneous changes were made in the handling of member records with missing data. However, none of these changes had any material impact on the actuarial results.

The schedules shown in the actuarial section and the trend data schedules in the financial section of the TRS financial report include selected actuarial information prepared by TRS staff. Six year historical information included in these schedules was based upon our work. For further information please see the full actuarial valuation report.

## EXECUTIVE SUMMARY

The actuarial valuation of the Teacher Retirement System of Texas (TRS) as of August 31, 2005, indicates that the System continues to have an unfunded actuarial accrued liability (UAAL). The UAAL increased from \$7.95 billion in 2004 to \$13.20 billion in 2005. The System will never be funded under the current contribution structure without developing future actuarial gains. It should be noted that in the absence of future investment losses or liability losses, the recognition of the deferred asset gains over the next four valuations should return TRS to a sound financial position.

The key results of this valuation as of August 31, 2005, may be summarized as follows.

Item	2005	2004
Membership		
• Number of		
- Active members	715,495	729,411
- Service retirees	230,740	223,125
- Disabled retirees	8,327	8,275
- Beneficiaries	9,442	9,227
- Inactive, vested	45,073	43,151
- Inactive, nonvested	<u>106,157</u>	<u>72,234</u>
- Total	1,115,234	1,085,423
• Payroll	\$ 25.957 billion	\$ 25.485 billion
Statutory contribution rates		
• State	6.00%	6.00%
• Member	6.40%	6.40%
Actuarial Information		
• Normal cost %	10.40%	11.72%
• Unfunded actuarial accrued liability (UAAL)	\$ 13.196 billion	\$ 7.953 billion
• UAAL as % of pay	50.8%	31.2%
• Funded ratio	87.1%	91.8%
• Funding period (years)	Never	Never
• GASB Annual Required Contribution	7.19%	7.31%

EXECUTIVE SUMMARY (cont.)

Item	2005	2004
<b>Assets</b>		
• Market value	\$ 93.708 billion	\$ 84.203 billion
• Actuarial value	89.299 billion	88.784 billion
• Estimated yield on market value	14.4%	11.9%
• Estimated yield on actuarial value	3.4%	2.6%
• Ratio of actuarial to market value	95.3%	105.4%
• Employee contributions, including service purchases	\$ 1,728.3 million	\$ 1,721.5 million
• State contributions	1,258.6 million	1,242.3 million
• Employer contributions	221.2 million	192.4 million
• Benefit, refund, and expense payments	5,673.5 million	5,748.3 million
• Net external cash flow	(2,465.4) million	(2,592.1) million
<b>Gains/(losses)</b>		
• Asset experience	\$ (4,068.0) million	\$ (4,718.7) million
• Assumption changes/Legislative changes	(1,143.3) million	2,024.7 million
• Liability experience	430.1 million	58.8 million
• Total	\$ (4,781.2) million	\$ (2,635.3) million

Item	Funding Period	GASB ARC
(1)	(2)	(3)
1. 2004 Valuation	Never	7.31%
2. Expected 2005 UAAL*	Never	7.31%
3. Expected 2005 UAAL using actual contributions	Never	7.37%
4. 2005 UAAL using expected assets and actual liabilities	Never	7.25%
5. 2005 UAAL using actual assets and liabilities	Never	8.23%
6. 2005 UAAL after benefit changes	Never	7.19%

\* The funding period for this entry uses the expected UAAL based on 30 year required contribution and expected payroll. The expected payroll is the prior year's valuation payroll, rolled forward at the 3% payroll growth rate.

## INTRODUCTION

The valuation of the Teacher Retirement System of Texas (TRS) as of August 31, 2005, reflects the following contribution rates: (a) a member contribution rate of 6.40%, and (b) a State contribution rate of 6.00%. Given legislative history since 1983 concerning the contribution rate, valuation results are determined assuming the current (6.00%) State contribution rate is the ultimate rate.

In preparing this valuation, Gabriel, Roeder, Smith & Company (GRS) has relied on employee data and asset information provided by the staff of the Teacher Retirement System. While not verifying the data at their source, GRS has performed such tests for consistency and reasonableness as has been deemed necessary to be satisfied with the appropriateness of using the data supplied.

This valuation reflects the changes to plan provisions as enacted by the 79<sup>th</sup> Texas Legislature. Legislation was adopted by the legislature since the prior valuation. This legislation changed the benefit provisions as follows:

1. Non-grandfathered members will be subject to the following new law changes effective September 1, 2005:
  - (i) final average salary at retirement will be determined by the highest five years (instead of three years) of salary,
  - (ii) subsidized early retirement for members at least age 55 and with 20 or more years of service will be eliminated, and
  - (iii) the partial lump sum option eligibility will require a combined age plus years of creditable service that equals at least 90 ("Rule of 90").
2. If a member meets any one of the following criteria on or before August 31, 2005, they are grandfathered (exempt) from the above changes:
  - (i) at least 50 years old, or
  - (ii) age and service credit equal at least 70 ("Rule of 70"), or
  - (iii) have at least 25 years of service credit.
3. Effective January 1, 2006, new members must pay the full actuarial cost for service purchases for out of state service.
4. New members who enter TRS after August 31, 2007 are also affected by the following changes:
  - (i) Minimum age 60 for unreduced retirement
  - (ii) reduced retirement at Rule of 80, benefit reduced 5% a year from age 60

Section A contains an executive summary of the most significant valuation results. The basic results of the valuation are covered in Section C. Section D contains the necessary disclosure items required by the Governmental Accounting Standards Board (GASB). Section E provides analysis and discussion of changes in assets. Section F produces a determination of actuarial gains and losses for the year and an analysis of the change in the funding period since the prior year's valuation. Section G summarizes the findings of the valuation, and Section H provides the tables supporting the report.

This valuation utilizes actuarial assumptions and methods modified as a result of the Experience Study for the four-year period ending August 31, 2003. These assumptions and methods were adopted by the Board on May 21, 2004.

In conjunction with the actuarial audit performed since the prior valuation, certain miscellaneous changes were made in the handling of member records with missing data. However, none of these changes had any material impact on the actuarial results.

## FUNDED STATUS OF THE SYSTEM

Table 3 in Section H details the normal cost of the Retirement System by its various components. This normal cost is developed based on the valuation method known as the entry-age-normal actuarial cost method. The total normal cost for the Retirement System is 10.40% of pay, this amount being inclusive of the amount contributed by the employees. The net normal cost for the State is 4.00% of pay based on the member contribution rate of 6.40%.

Since the State contribution rate is 6.00%, this allows 2.00% of pay contributed by the State to be available to amortize any unfunded actuarial accrued liabilities.

As stated earlier, the funding period for the System is determined under the entry-age-normal actuarial cost method based on a level percentage of pay. The key points of this method are as follows:

1. The "normal cost" for the System is deemed to be equal to the average cost of benefits for newly hired participants.
2. The "actuarial accrued liability" for benefits payable in the future to present active members is calculated as the present value of benefits payable in the future to present active members less the present value of future normal costs.
3. Funding of the unfunded actuarial accrued liability (UAAL) is a function of the rate of future growth in total covered payroll.

Table 5 develops the funding period under the above approach not only for the current valuation, but also for the valuation as of August 31, 2004. As shown in Item A3 of Table 5, the normal cost for the System consists of the entire 6.40% of pay contributed by the members plus 4.00% of pay from the State. As developed in Item A4, the 6.00% of pay contributed by the State is 2.00% of pay more than the State normal cost. From an actuarial perspective, the contribution rate in excess of the System's normal cost should be sufficient to amortize the UAAL over a reasonable period of time. However, the current contribution rate in excess of the System's normal cost (2.00%) is not sufficient to amortize the System's UAAL if all actuarial assumptions are exactly met.

The UAAL as shown in Item B4 of Table 5 is \$13.20 billion for 2005, an increase from \$7.95 billion in 2004. As indicated in the table, the UAAL equals the difference between the total actuarial accrued liability (Item B2d) and current actuarial assets (Item B3). The excess contributions above the normal cost will be used to help reduce the UAAL. However, while the current contribution rate pays for the System's normal cost, the excess above the normal cost is not sufficient to amortize the UAAL, and therefore in the absence of actuarial gains or increased contributions the UAAL is expected to continue to increase. On the positive side, however, it should be noted that the System is now deferring \$4.4 billion in net asset gains. In the absence of future investment losses or liability losses, the UAAL should decrease over the next four valuations.

In determining the number of years that will be required to amortize the UAAL, an assumption is made concerning future growth of the payroll of the System. GASB Statement No. 25 requires that the payroll growth assumption not consider growth in the active employee census. Under GASB 25 the appropriate payroll growth assumption is 3.00%.

As shown in Item B6 of Table 5 and using the assumed rate of increase in covered payroll of 3.00%, the period to fund the UAAL is still infinite, i.e., the UAAL will never be funded under the current contribution structure without future actuarial gains. An analysis of the change in the UAAL and the funding period since the 2004 valuation is provided in Section F.

Although there was favorable investment experience on a market value basis during the year, the experience on an actuarial value of assets (AVA) basis was not favorable. This is due to the asset smoothing methodology that is used to determine the actuarial value of assets. Because of the asset smoothing methodology, as may be seen in Item 2 of Table 4b, the AVA methodology is still recognizing deferred investment losses from fiscal years 2001 & 2002. The actuarial asset yield for 2005 is 3.4%, higher than the rate of 2.6% in 2004, but lower than the assumed rate of 8.0%.

The unfavorable actuarial investment experience (3.4% yield based on actuarial assets) has resulted in an increase in the TRS under-funded status.

However, it should be noted that the System is now in a position where the actuarial value of assets is less than the market value, creating \$4.4 billion in deferred asset gains. Without significant investment losses over the next few years, these deferred gains will lower the UAAL over the next four valuations.

Table 7 offers a comparative view of the unfunded actuarial accrued liability (UAAL). It compares the UAAL with three items: the covered payroll for the year, the total actuarial value of assets at the end of the year, and the total actuarial liabilities (or, equivalently, the total present value of future benefits) as of the valuation date.

The actuarial value of assets is developed in Table 4b. It should be remembered that the intent of the actuarial asset valuation method is to smooth out year-to-year fluctuations in market rates of return.

It accomplishes this smoothing effect by recognizing the excess or shortfall in total market return over the expected return at the rate of 20% per year over a five year period. The excess or shortfall of investment income attributable to the most recent four years is shown in Table 4a.

While the design of the actuarial asset valuation method is to smooth out year-to-year fluctuations in market rates of return, the method is also designed to not allow the actuarial value of assets to drift too far from the actual market value of assets. To accomplish this goal a corridor is established around the market value of assets (not less than 80% or more than 120% of the market value of assets). If the actuarial value of assets using the smoothing technique produces a preliminary actuarial value of assets that is outside of the corridor, then the actuarial value of assets is set equal to the nearest corridor threshold. The 2002 valuation was the first time this corridor had impacted the actuarial value of assets. At the 2003 valuation the actuarial value of assets returned to a value that was inside the corridor, and it has remained there since. The preliminary actuarial value of assets is \$89.3 billion as shown in Item 4 of Table 4b. This number is equal to 95.3% of the market value of assets. Since that lies within our 80% to 120% corridor, the preliminary actuarial value of assets becomes the final actuarial value of assets as shown in Item 6 of Table 4b.

Table 2 provides an overall summary of key actuarial data for the 2005 valuation, with comparative data for 2004. This information is summarized from the other tables, which supply more detail. Its value is in providing in one convenient place key comparative valuation results.

The fact that the total contribution rate is not sufficient to amortize the current UAAL creates a period of extreme caution for TRS. As noted above, the System has an unfunded liability of \$13.2billion. Even with \$4.4 billion in net deferred investment gains, unless the UAAL is offset by more actuarial gains, the System may not achieve a 30-year funding period without an increase in its contribution rate. However, the size of the actuarial gains needed to return the funding period to below 30 years has decreased dramatically due to the changes in the benefit provisions. Because of the changes in benefit provisions and the deferred asset gains, the 30 year ARC is expected to decrease over the next four valuations and flatten out between 6.00% and 6.20%.

## **GASB DISCLOSURE**

The Governmental Accounting Standards Board (GASB) has issued Statement No. 25 which provides the manner in which the actuarial condition of a public sector retirement plan is to be disclosed and which replaces GASB No. 5.

TRS elected to comply with GASB No. 25 beginning with the fiscal and plan year ending August 31, 1996. The required actuarial disclosure tables are represented by Tables 14a – 14c.

GASB No. 25 provides for a calculation of an annual required contribution (ARC). The ARC for TRS is greater of the 6.00% state contribution rate or the 30-year funding cost. Since the System is now underfunded, the 30-year funding cost exceeds 6.00%. For the 2005 valuation, it is 7.19% of pay.

TRS's auditors consider TRS a "special situation multi-employer plan" under GASB 27, and the State has established a Net Pension Obligation. The State's 2005/2006 fiscal year needs to reflect the difference between its 6.00% contribution rate and the 7.19% ARC.

## CHANGE IN ASSETS DURING THE YEAR

This section provides an analysis of the change in the Plan Net Assets during the year and an estimate of the yield on mean assets of the total System. Table 8a shows a rearrangement of some of the tables included in the annual financial statements of the System. Table 8b shows the estimated yield on a market value basis and on the actuarial asset valuation method.

To determine estimated yield on "mean assets", the traditional insurance company formula for yield rates is used. The estimated yield is derived by dividing the appropriate income by the corresponding mean assets.

As indicated by Item A4 of Table 8b, the estimated yield on mean market value is 14.4%, up from the 11.9% return in 2004. The actuarial asset yield (Item B4) is 3.4%, compared to 2.6% in 2004, and compared to the 8% assumption rate. This difference in the estimated yield on market value and actuarial value illustrates the smoothing effect of the asset valuation method.

As mentioned in Section C, the investment results on an actuarial value basis are unfavorable for the 2004/2005 plan year. On an actuarial value basis the System fell short of its 8% assumption rate. As a result, the System suffered an actuarial investment loss of \$4.068 billion. It should be noted, however, that the asset valuation method is deferring \$4.409 billion in unrecognized gains into future years. This deferred gain will be recognized over the next four actuarial valuations. If there are no investment losses or other liability losses during these four years, the funded status of the System should strengthen.

## ACTUARIAL GAINS (LOSSES) AND THE FUNDING PERIOD

Section C has noted that the unfunded actuarial accrued liability (UAAL) has increased from \$7.95 billion in 2004 to \$13.20 billion in 2005. The funding period has remained at “never”. The purpose of this section is to determine the source of the gains and losses and the impact of those gains and losses on the funding period.

Section E has discussed the change in assets for the year. Table 8b develops the estimated yield for the year based on two measures of asset values. Table 9 takes the information contained in Table 8 and develops the expected value of actuarial assets for this valuation, based on the investment return assumption of 8%.

As shown in Item 7 of Table 9, the expected value of actuarial assets as of August 31, 2005 is \$93.4 billion. As developed in Table 4, the actual value of actuarial assets as of the valuation date is \$89.3 billion (as repeated in Item 8 of Table 9). Thus the asset loss for the year is the difference between the actual value and the expected value, or \$(4.1) billion (as shown in Item 9). Item 10 indicates that this loss represents -4.56% of this year's actuarial assets. This asset loss for the year is a direct reflection of the estimated yield for the year based on the value of actuarial assets, namely 3.4% (as shown in Item B4 of Table 8b).

Table 10 develops the total actuarial gain (loss) for the year and separates it between the asset gain (loss) and the liability gain (loss). The items in Table 10 that are used to develop the expected UAAL as of August 31, 2005 are derived from Table 5 and Table 8. The total actuarial loss for the year is seen to be \$(4.8) billion. It should be noted that this \$(4.8) billion loss includes the impact of the change in the benefit provisions.

The change in the benefit provisions increased the UAAL even though the legislation decreased the value of future benefits for many members and all future new hires. The UAAL increased because of the actuarial cost method used for the valuation. As described in Section C, the normal cost for the System is deemed to be the cost of benefits for newly hired participants. This legislation lowered the normal cost from 11.72% to 10.40%.

The accrued liability is determined by subtracting the present value of future normal costs from the present value of benefits of your current population. Because the legislation did not decrease the present value of benefits for a large portion of the current population but the actuarial valuation method decreased the present value of normal costs for these members, the actuarial liability must be the offsetting item, and thus increase.

Even though the UAAL increased because of the legislation, the contribution requirements decreased because the decrease in the normal cost had more impact than the increase in the UAAL. The legislation increased the UAAL \$1.1 billion, or caused a loss of \$(1.1) billion.

Since the asset loss for the year is \$(4.1) billion, this means that there is an overall actuarial gain associated with the liability experience of the System in an amount equal to \$0.4 billion. (Total loss of \$(4.8) billion less the asset loss of \$(4.1) billion less the change in benefit provisions of \$(1.1) billion.) The liability gain was not significant in size and it was more than offset by the large asset loss, producing a large total loss for the System.

Table 11 traces the changes in the UAAL and the funding period from the valuation as of August 31, 2004, to August 31, 2005. In the absence of the loss on the actuarial value of assets, the System would have a funding period. This result would have occurred because the new benefit provisions reduced the normal cost by a significant enough margin to allow the current contribution pattern to amortize the UAAL over a period of 36.0 years as of August 31, 2005.

Item 3 of Table 11 shows the funding status if there had been no actuarial gains or losses in the areas of assets, liabilities, or growth in covered payroll. The UAAL would have increased during the year to \$8.4 billion.

Item 4 of Table 11 illustrates that the liability experience gain decreased the UAAL to \$8.0 billion but that the asset loss and benefit changes (shown in Item 5 & 6) increased the UAAL to \$13.2 billion. When the UAAL is positive and the contribution rate in excess of the normal cost rate is not sufficient to amortize the UAAL, the funding period is “never” (or “infinite”).

Column 7 traces the change in the GASB Annual Required Contribution (ARC) from the valuation as of August 31, 2004 to August 31, 2005. As may be seen, the decline in the normal cost rate from the legislated changes more than offset the impact of the legislation’s increase in the UAAL, and the resulting ARC is reduced to 7.19% of pay.

## SUMMARY AND CLOSING COMMENTS

To summarize the results of the actuarial valuation of the Teacher Retirement System as of August 31, 2005, it is our opinion that the System has begun to move to a more encouraging position from an actuarial perspective. In the absence of future losses, it is possible that the current contribution rates may become sufficient to meet GASB requirements in the next three to four years. It is our opinion that without future actuarial gains or losses, the GASB required contribution will decrease over the next few valuations and level off between 6.00% and 6.20%.

However, the funding period for the August 31, 2005 valuation is determined as “never” based on the 3.00% payroll growth assumption and based on the current 6.00% State contribution rate because the valuation does not recognize the net deferred investment gains.

Because of this situation, extreme caution is still warranted. The System’s contribution rate exceeds its normal cost rate by only 2.00% of pay. This small excess contribution rate over the normal cost is not sufficient to amortize the current UAAL. Additional liabilities without additional funding would only exacerbate the situation. The biggest obstacle is the turmoil that has existed in the investment markets. The System is under-funded by \$13.2 billion.

In order for the System to again become fully funded during this period of time, it must generate sufficient market gains (or liability gains) to reduce the \$13.2 billion UAAL to a level that the current contribution rate can support. Otherwise the System will require an increase in its contribution rate. Given the size of the deferred asset gains, the System should take a wait and see stance to see if actuarial gains are recognized over the next few valuations. However, if a significant actuarial loss is experienced over that time, it is possible that a future increase in the contribution rate would be required.

Any increase in the State contribution rate, however, should be put in historical perspective. With the exception of non-actuarial issues (related to Texas budget reasons), the TRS State contribution rate has either decreased or remained the same since 1979. At 7.19%, the State contribution rate would be less than the 7.31% rate that was contributed during fiscal years 1992-1995.

For the foreseeable future, no benefit enhancements, including ad hoc increases, should be considered without contribution rate increases. The starting point for any proposed enhancements would be an increase of 1.19% of pay in the contribution rate.

CHANGE IN PLAN NET ASSETS

	Year Ending August 31, 2005	
	(1)	
I. <u>Revenue for the Year</u>		
A. Contribution and fees		
1. Member contributions	\$ 1,578,339,475	
2. State contributions - State of Texas	1,257,671,695	
3. State contributions - 415 Excess Plan	926,187	
4. State contributions - Employers	221,158,942	
5. Reinstatement of withdrawals	96,692,115	
6. Reinstatement fees	53,302,228	
7. Appropriation for expenses	-	
8. Total		\$ 3,208,090,642
B. Income		
1. Interest	\$ 1,056,392,052	
2. Dividends	1,273,580,628	
3. Net appreciation in fair value of investments	9,607,205,397	
4. Income from Securities Lending	33,041,427	
5. Investment expenses	(17,394,917)	
6. Total		11,952,824,587
C. Other Adjustments	\$ -	
D. Total Revenue		\$ 15,160,915,229
II. <u>Expenditures for the Year</u>		
A. Refund of Contributions		\$ 243,382,014
B. Benefit Payments		
1. Service retirements	\$ 4,709,693,259	
2. DROP payments	55,152,336	
3. Partial Lump Sum Option payments	288,088,743	
4. 415 Excess Plan payments	926,187	
5. Disability retirements	129,331,288	
6. Death and survivor benefits	204,413,615	
7. Total benefits		\$ 5,387,605,428
C. Expenses		
1. Gross expenses		
a. Administrative expenses	\$ 25,114,716	
2. Miscellaneous reimbursements	(21,315)	
3. Total expenses		25,093,401
D. Total Expenditures		\$ 5,656,080,843
III. <u>Net Increase in Plan Net Assets (Item I.D. - Item II.D.)</u>		\$ 9,504,834,386

ESTIMATION OF YIELDS

Item	Year Ending August 31, 2005	Year Ending August 31, 2004
(1)	(2)	(3)
A. Market value yield		
1. Beginning of year net market assets	\$ 84,202,981,707	\$ 77,633,002,461
2. Investment income	11,927,731,186	9,121,019,840
3. End of year market assets	93,707,816,093	84,202,981,707
4. Estimated market value yield	14.4%	11.9%
B. Actuarial value yield		
1. Beginning of year actuarial assets	\$ 88,783,870,893	\$ 89,033,023,666
2. Investment income	2,937,839,132	2,301,887,821
3. End of year actuarial assets	89,298,813,225	88,783,870,893
4. Estimated actuarial value yield	3.4%	2.6%

ACTUAL VERSUS EXPECTED ACTUARIAL ASSETS

Item	Year Ending August 31, 2005	Year Ending August 31, 2004
(1)	(2)	(3)
1. Actuarial assets, beginning of year	\$ 88,783,870,893	\$ 89,033,023,666
2. Total contributions during year	3,208,090,642	3,156,205,813
3. Benefits paid during year (including DROP)	(5,387,605,428)	(5,486,849,698)
4. Refunds paid during year	(243,382,014)	(220,396,709)
5. Expenses for the year	N/A	N/A
6. Assumed net investment income at 8%		
a. Beginning of year assets	\$ 7,102,709,671	\$ 7,122,641,893
b. Contributions	128,323,626	126,248,233
c. Benefits	(215,504,217)	(219,473,988)
d. Refunds	(9,735,281)	(8,815,868)
e. Expenses	N/A	N/A
f. Total	\$ 7,005,793,799	\$ 7,020,600,270
7. Expected actuarial assets, end of year (Sum of Items 1 through 6)	\$ 93,366,767,892	\$ 93,502,583,342
8. Actual actuarial assets, end of year	89,298,813,225	88,783,870,893
9. Asset gain (loss) for year (Item 8 - Item 7)	(4,067,954,667)	(4,718,712,449)
10. Asset gain (loss) as % of actual actuarial assets	(4.56%)	(5.31%)

GAIN OR LOSS FOR THE YEAR

Item (1)	Year Ending August 31, 2005 (2)	Year Ending August 31, 2004 (3)
<b>A. CALCULATION OF TOTAL GAIN OR LOSS</b>		
1. Unfunded actuarial accrued liability (UAAL),		
a. Previous year, before Assumption changes	\$ 7,952,654,577	\$ 5,230,003,876
b. Previous year, after Assumption changes	7,952,654,577	3,205,339,710
2. Normal cost for the year	2,890,458,330	2,802,450,005
3. Contributions for the year	(3,058,096,299)	(2,964,978,118)
4. Interest at 8%		
a. On UAAL	\$ 636,212,366	\$ 256,427,177
b. On normal cost	115,618,333	112,098,000
c. On contributions	(122,323,852)	(118,599,125)
d. Total	\$ 629,506,847	\$ 249,926,052
5. Expected UAAL (Sum of Items A1 through A4)	8,414,523,455	3,292,737,649
6. Actual UAAL	13,195,722,869	7,952,654,577
7. Gain (loss) for the year (Item A5 - Item A6)	\$ (4,781,199,414)	\$ (4,659,916,928)
<b>B. SOURCE OF GAINS AND LOSSES</b>		
1. Asset gain (loss) for the year (Table 9)	\$ (4,067,954,667)	\$ (4,718,712,449)
2. Asset gain (loss) as a % of actuarial assets	(4.56%)	(5.31%)
3. Total actuarial accrued liability gain (loss) for year (Item A7 - Item B1)	(713,244,747)	58,795,521
4. Analysis of actuarial accrued liability loss		
a. Legislative changes	(1,143,299,178)	-
b. Liability experience	430,054,431	58,795,521
c. Total	\$ (713,244,747)	\$ 58,795,521
5. Experience liability gain (loss) as % of total actuarial accrued liability (Item B4b as % of total actuarial accrued liability)	0.42%	0.06%

ANALYSIS OF CHANGE IN FUNDING PERIOD

Basis	UAAL (\$ Millions)	Normal Cost Rate	Total Contribution Rate	Funding Period	Change in Funding Period	GASB ARC
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. 2004 Valuation	7,953	11.72%	12.40%	Never	--	7.31%
2. Expected 2005 UAAL*	8,167	11.72%	12.40%	Never	--	7.31%
3. Expected 2005 UAAL using actual contributions	8,414	11.72%	12.40%	Never	--	7.37%
4. 2005 UAAL using expected assets and actual liabilities	7,985	11.72%	12.40%	Never	--	7.25%
5. 2005 UAAL using actual assets and liabilities	12,053	11.72%	12.40%	Never	--	8.23%
6. 2005 UAAL after benefit changes	13,196	10.40%	12.40%	Never	--	7.19%

\* The funding period for this entry uses the expected UAAL based on 30 year required contribution and expected payroll. The expected payroll is the prior year's valuation payroll, rolled forward at the 3% payroll growth rate.

1991	7.65%	100%

The information presented in the required supplementary schedules was determined as part of the actuarial valuations at the dates indicated. Additional information as of the latest actuarial valuation follows:

Valuation date	August 31, 2005
Actuarial cost method	Entry Age Normal
Amortization method	Level percent, open
Remaining amortization period*	30 years
Asset valuation method	5-year smoothed market
Actuarial assumptions:	
Investment rate of return **	8.00%
Projected salary increases **	4.25% to 26.40%
Weighted-average at valuation date	6.61%
**Includes inflation at	3.0%
Cost-of-living adjustments	None

\* The current employer contribution of 6.00% is not sufficient to amortize the unfunded liability of the System. Consequently, the amortization period for the current contribution rate is never. The Annual Required Contribution (ARC) of 7.19% shown on Table 13 has an amortization period of 30 years.

## SUMMARY OF THE BENEFIT PROVISIONS OF THE RETIREMENT SYSTEM AS OF AUGUST 31, 2005

The Teacher Retirement System of Texas makes retirement, disability, and death and survivor benefits to all employees of the public school system of Texas. The major provisions of the System may be summarized as follows:

### A. RETIREMENT BENEFITS

1. Normal Retirement Date:

- (a) end of month following age 65 and 5 years of creditable service,
- (b) end of month following age 60 and 20 years of creditable service, or
- (c) For members hired before August 31, 2007: end of month following attainment of "Rule of 80".

2. Standard Annuity:

The product of 2.3% of the member's average compensation multiplied by years of creditable service. For members hired before August 31, 2007, the average compensation is calculated as the best 3-year average. For members hired after that date, the average compensation is a 5-year average.

3. Normal Retirement Benefits:

Greater of standard annuity, or \$150 per month.

4. Early Retirement:

- (a) after age 55 with 5 or more years of creditable service, or
- (b) after 30 years of creditable service, regardless of age.
- (c) For members hired after August 31, 2007, end of month following attainment of "Rule of 80".

5. Early Retirement Benefits:

- (a) If a member meets any one of the following criteria on or before August 31, 2005: (i) at least 50 years old, or (ii) age and years of service credit equal at least 70, or (iii) have at least 25 years of service credit, the early retirement benefit is equal to the normal retirement benefit earned to the date of retirement, reduced according to the following table:

Years of Service	AGE AT DATE OF RETIREMENT					
	55	56	57	58	59	60
20	90%	92%	94%	96%	98%	100%

27	100%	100%	100%	100%	100%	100%
28	100%	100%	100%	100%	100%	100%
29	100%	100%	100%	100%	100%	100%
30 or more	100%	100%	100%	100%	100%	100%

- (b) If the member was hired before August 31, 2007 and either (1) is not grandfathered as described above, or (2) does not have 20 years of service, the early retirement benefit is equal to the normal retirement benefit earned to the date of retirement, reduced according to the following table:

Years of Service	AGE AT DATE OF RETIREMENT										
	55	56	57	58	59	60	61	62	63	64	65
5-19	47%	57%	55%	59%	63%	67%	73%	80%	87%	93%	100%

- (c) If the member was hired after August 31, 2007 the benefit is reduced 5% per year from age 60.

6. Normal Form of Benefit:

Straight life annuity payable monthly with benefits commencing at end of month following retirement with the last payment payable on behalf of the annuitant in the month of death.

7. Optional Forms:

**Option 1** - joint and 100% survivor, benefit reverts to normal form following the death of the joint annuitant.

**Option 2** - joint and 50% contingent survivor, benefit reverts to normal form following the death of the joint annuitant.

**Option 3** - 5 years certain and life.

**Option 4** - 10 years certain and life.

**Option 5** - Joint and 75% contingent survivor, benefit reverts to normal form following the death of the joint annuitant.

**Partial Lump**

**Sum Option** - Members, with a combined age plus years of service that equals at least 90 and not participating in the DROP program, may select a partial lump-sum distribution not to exceed an amount equal to 36 months of a standard service retirement annuity. When this option is selected, the member's annuity will be actuarially reduced to reflect that distribution and will be computed so that no actuarial loss results to TRS.

8. Deferred Retirement Option Plan (DROP):

A. Eligibility:

- 1) Must be an active contributing member.
- 2) Must be eligible for a standard service retirement annuity that is not reduced for retirement at an early age.
- 3) Must have at least 25 years of creditable service.
- 4) Must have entered the DROP program before January 1, 2006.

B. Program Summary:

- 1) Participation begins the 1st of the month following the member's application and TRS approval of the application. Participation may begin in any month.
  - 2) Participation may range from a minimum of one year to a maximum of five years, in 12-month increments. The member elects the period of participation at the outset.
  - 3) The amount of the member's standard annuity is established as of the date of participation in the DROP. This amount is also used in determining the monthly deposit to the DROP account. A member will not accumulate further retirement annuity benefits during DROP participation, i.e., no further credit will be achieved from years of service or compensation changes.
  - 4) Any special service credit that a member wishes to purchase must be paid in full prior to DROP participation.
  - 5) A separate DROP account will be established for each participating member. Each month, an amount equal to 60 percent of the calculated standard annuity will be deposited into the account. At retirement, the account plus interest at the rate of five percent per annum will be distributed.
  - 6) Member and employer contributions continue during DROP participation. Contributions are not deposited into the member's DROP account and will not be refunded.
  - 7) Three events terminate participation - death, retirement or expiration of the participation period.
  - 8) Upon retirement, participating members will receive their retirement annuity plus the balance in their DROP account including interest. DROP balances may be paid by TRS in a lump sum or on a time payout selected by the member.
9. Partial Lump-Sum Option Program:
- Members, eligible for unreduced retirement and either (1) grandfathered or (2) meeting the Rule of 90, and not participating in the DROP program, may select a partial lump-sum distribution not to exceed an amount equal to 36 months of a

standard service retirement annuity. When this option is selected, the member's annuity will be actuarially reduced to reflect that distribution and will be computed so that no actuarial loss results to TRS.

Percentages shown in the table below will be applied to reduce a member's standard annuity when he or she elects a partial lump-sum distribution.  
The percentage shown in the following table will be applied to reduce the standard annuity when the partial lump-sum option is elected.

Age	Percentage of Standard Annuity		
	12 Months	24 Months	36 Months
45	91.66	83.32	74.98
46	91.62	83.23	74.85

90	75.52	51.04	26.56
91	74.13	48.26	22.39

10. Minimum Annuity Payments:

Total annuity payments shall in no case be less than the member's accumulated contributions at retirement. Upon the death of a retiree, the excess, if any, of accumulated contributions over total annuity payments received prior to death will be paid to the beneficiary.

B. DISABILITY BENEFITS

1. Less than 10 years of creditable service: \$150.00 per month for the shorter of:
  - (a) disability, or
  - (b) number of months of creditable service as of date of disability retirement.
2. At least 10 years of creditable service: the greater of accrued retirement income or \$6.50 per month per year of creditable service, payable for duration of disability; disability presumed continuous if it continues past age 60. The minimum disability payment made on behalf of a member will be no less than \$150.00 per month.

C. DEATH BENEFITS

1. Eligibility: applicable if death occurs:
  - (a) in service,
  - (b) while absent from service for good cause,
  - (c) while not in service but eligible to retire,
  - (d) while not in service but would be eligible to retire without additional service before April 15 of the sixth school year after last creditable year of service, or
  - (e) while receiving a disability benefit, but only eligible for 2f, below.
2. Benefit: any one of the following, at the option of the beneficiary:
  - (a) a lump sum (not to exceed \$80,000) equal to two times the rate of pay for the last year of service,
  - (b) a lump sum (not to exceed \$80,000) equal to two times annual pay for the year preceding last year of service,

- (c) 60 monthly payments of accrued standard annuity,
- (d) a life annuity payable under Option 1 as if the member had retired on the last day of the month preceding death,
- (e) a refund of accumulated contributions, or
- (f) the survivor benefits, if eligible.

Note: Items (c) and (d) available only if member has at least 5 years of creditable service.

3. Benefit if Absent from Service Without Good Cause: return of accumulated contributions.

D. SURVIVOR BENEFITS

1. Benefits: (a) or (b) at the election of the beneficiary:

- (a) lump sum payment of \$10,000, or
- (b) lump sum payment of \$2,500 plus one of the following, if the designated beneficiary is eligible:
  - (i) if a spouse or dependent parent, \$250 per month commencing at age 65,
  - (ii) if a spouse with children under age 18, \$350 per month until youngest child reaches 18, then \$250 per month commencing at spouse's age 65, or
  - (iii) if dependent children, \$350 per month as long as at least two dependent children under 18, reducing to \$250 per month when there is only one child under 18.

If benefits are payable under (i) or (ii) above and eligible spouse or dependent dies, payments will revert in accordance with (iii) above.

2. Eligibility:

- (a) all employees eligible for a death benefit other than refund of accumulated contributions,
- (b) any retired member, in addition to any benefit provided by his or her option of payment, or

- (c) any disabled participant, in lieu of other death benefits (Item C2).

E. VESTING OF BENEFITS

1. Vesting: a member is fully vested after 5 years of creditable service.
2. Benefits upon Vesting: a fully vested member is entitled to the following:
  - (a) upon becoming inactive, not required to withdraw accumulated contributions within seven years,
  - (b) may apply at age 65 for normal retirement benefit equal to accrued standard annuity, or
  - (c) may apply for any other retirement benefits for which he or she is eligible upon satisfying age requirement (if applicable) if he or she satisfied the corresponding service requirement at time of last termination; benefit is based on his or her full accrued standard annuity.

F. MEMBER CONTRIBUTIONS

6.40% of compensation per year.

G. STATE CONTRIBUTIONS

6.00% of member compensation each year.

H. LEGISLATIVE CHANGES MADE BY THE 1991 STATE LEGISLATURE

1. The minimum retirement benefit increased from \$75 to \$100 per month.
2. The disability death benefit changed to the same as a service retirement death benefit.
3. An ad hoc cost of living increase was approved for members who retired prior to May 1, 1989. The increase does not apply to a survivor benefit or to a disability benefit for a member who had less than 10 years of service at the time of retirement or death. The amount of the increase is five-tenths of one percent of each full six-month period between the latest effective date of retirement (or date of death) and August 1, 1991. The increase begins August 1991.

I. LEGISLATIVE CHANGES MADE BY THE 1993 STATE LEGISLATURE

1. Increase in survivor benefit by \$50 per month.
2. Retroactive minimum benefit of \$6.50 per year of service for members retired as of November 1, 1991.
3. An ad hoc cost of living increase approximating a 25% CPI catch-up. The actual percentage increase varies by year of retirement and has a minimum increase of 5%. The increase begins with the January, 1994 annuity check and covers all benefit recipients who began receiving benefits before August 31, 1991, except that it does not apply to survivor benefits or to a disability benefit for a member who had less than 10 years of service at the time of retirement or death.
4. ERS/TRS transfer provisions.
  - (a) Service credit transfers allowed if the participant is a member of both ERS and TRS and has at least three years of service credit in the System from which the member is retiring.
  - (b) A member may reinstate or purchase service credit in the other System prior to making the transfer if that member has at least three years of service credit in the current System.
  - (c) TRS and ERS will jointly set rules for the assumptions used in computing asset transfer amounts. The transfer of funds between ERS and TRS takes place at the time of actual retirement.

J. LEGISLATIVE CHANGES MADE BY THE 1995 STATE LEGISLATURE

1. Unreduced benefits at retirement were expanded to include participants age 50 or older with 30 or more years of service.
2. Annuitants' benefits increased in an amount equal to the greater of:
  - (a) A recalculation of benefits based on
    - (i) January 1, 1995 law with all intervening ad hoc increases, plus
    - (ii) A CPI catch-up increase.

- (b) A recalculation of benefits for retirees who retired before September 1, 1993, based on a 2% multiplier and a minimum annual salary of a classroom teacher or full-time librarian as described by the Education Code. This annual salary is currently \$17,000 based on current Education Code.
- 3. Treat all Option 1 and Option 2 benefits as including the pop-up feature.
- 4. The annuity payment in the month of death is payable on behalf of the annuitant.
- 5. The disability benefit payable when a member has less than ten years of service increased from \$50 per month to \$150 per month for both current and future disabled members. The minimum disability payment made on behalf of a member with ten or more years of service shall be no less than \$150 per month.
- 6. The benefit increase reserve account in TRS was eliminated, resulting in the liability for all annuity benefits being included within the retired reserve account.
- 7. The maximum two-times-pay death benefit payable on behalf of a member would increase from \$60,000 to \$80,000.

K. LEGISLATIVE CHANGES MADE BY THE 1997 STATE LEGISLATURE

- 1. Driver's education pay is added to plan compensation for the determination of a member's best 3-year average compensation.
- 2. Disabled participants are allowed to select a Joint and Survivor annuity option after commencement of disability benefits, if they become married after date of disability.
- 3. Retirees are allowed to change the designated beneficiary for pension benefits payable after their death under certain conditions.
- 4. Adoption of "Rule of 80" criteria for unreduced standard retirement annuity (i.e., sum of member's age & credited service is greater than or equal to 80).
- 5. Elimination of \$6.50 per month per year of service minimum standard retirement annuity benefit.
- 6. Addition of \$50.00 to the minimum survivor benefit.
- 7. Creation of a Deferred Retirement Option Program (DROP), described in Item A8 above.

8. A CPI catch-up ad hoc cost-of-living increase for retired members.

L. LEGISLATIVE CHANGES MADE BY THE 1999 STATE LEGISLATURE

1. Increased multiplier from 2.0% to 2.2% effective September 1, 1999, and an equivalent 10% increase for all retirees.
2. A CPI catch-up ad hoc cost-of-living increase for retired members.
3. Established a partial lump-sum option at time of retirement.
4. DROP participant enrolled on or before August 31, 1999, have a one-year window from September 1, 1999 to revoke DROP participation.
5. For members entering DROP on or after September 1, 1999, the monthly DROP deposit will be reduced from 79% to 60% of the standard annuity.
6. Provides a lump-sum death benefit of \$160,000 for an active member employed by a school district who dies due to a physical assault during the performance of their regular duties.
7. Allows a return to teaching after being retired at least 12 months without a reduction in the retirement benefit under certain circumstances.

M. LEGISLATIVE CHANGES MADE BY THE 2001 STATE LEGISLATURE

1. Increased multiplier from 2.2% to 2.3% effective September 1, 2001, and an equivalent 4.5% increase for all retirees.
2. A 6% ad hoc increase for retired members.
3. Increase in survivor benefits of \$50 per month.
4. Allows a return to work as a bus driver with no reduction in the monthly benefit if retired with an unreduced benefit.
5. Permits purchase of up to 3 years of “air time” if the member has at least 7 years of actual membership service. Purchase price is the full actuarial cost of the purchased service.

N. LEGISLATIVE CHANGES MADE BY THE 2003 STATE LEGISLATURE

1. For employees hired on or after September 1, 2003, a 90-day waiting period is required for participation in TRS. Members may have the option to purchase this service. This provision is set to expire on September 1, 2005.
2. Limits the collection of overpayments to the three years prior to the overpayment discovery, except in cases of fraud or knowledge by the participant that the payments were incorrect.
3. Repealed the requirement that in order to reinstate service withdrawn after August 31, 2003, for the purposes of ERS/TRS transfer, the member must belong to the system from which the service is purchased.
4. Retirees who are employed by a third-party entity are considered to be employees of the school for return to work purposes unless the retiree does not perform duties or provide services in behalf of the school.
5. Retirees may work as a substitute and on a half-time basis during a single calendar month as long as the total days worked do not exceed the number of days for one-half time employment for that month.

O. LEGISLATIVE CHANGES MADE BY THE 2005 STATE LEGISLATURE

1. Final average salary at retirement will be determined by the highest five years (instead of three years) of salary, subsidized early retirement will be eliminated, and partial lump sum option eligibility will require a combined age plus years of creditable service that equals at least 90 ("Rule of 90").
2. Future members (those who establish TRS membership on or after September 1, 2007) will have the following eligibility requirements to qualify for an unreduced annuity at retirement: (i) age 65 with 5 years of service, or (ii) age 60 with at least 5 years of service and meets the Rule of 80 (combined age and years of service equal at least 80).
3. Employers will be required to pay a monthly surcharge to the pension fund for each retiree working in a TRS-covered position and reported to TRS.
4. The Deferred Retirement Option Plan (DROP) is being discontinued for new participation effective December 31, 2005.

**ACTUARIAL ASSUMPTIONS AND METHODS**  
**(Adopted May 21, 2004)**

**ACTUARIAL ASSUMPTIONS**

1. Investment Return Rate      8.00% per annum, compounded annually, composed of an assumed 3.00% inflation rate and a 5.00% real rate of return
2. Mortality, Withdrawal, Disability Retirement, and Service Retirement Rates:

Rates and scales developed in the actuarial investigation as of August 31, 2003, with values at specimen ages shown in the tables below:

a.

<u>Age</u>	<u>PROBABILITY OF DECREMENT DUE TO</u>	
	<u>Death</u>	<u>Disability Retirement</u>
<u>MALE MEMBERS</u>

74	0.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000

Probability of Decrement Due to Retirement – Female Members

Years of Service								
Age	0-4	5-9	10-14	15-18	19	20-24	25-29	30+
50	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.300
55	0.000	0.020	0.020	0.020	0.020	0.080	0.230	0.230
60	0.000	0.030	0.030	0.030	0.030	0.300	0.300	0.300
65	0.000	0.320	0.320	0.320	0.320	0.320	0.320	0.320
70	0.000	0.250	0.250	0.250	0.250	0.250	0.250	0.250
74	0.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000

There is a minimum 0.1000 probability for retirement under Rule of 80. Also, for members hired after August 31, 2007, the retirement rates for members once they reach unreduced retirement eligibility at age 60 are increased 10% for each year the member would have been eligible under the Rule of 80.

3. Rates of Salary Increase

Inflation rate of 3.00%, plus productivity component of 1.25%, plus step-rate/promotional component as shown:

Years of Service	Annual Step Rate/ Promotional Rates of Increase		Total Annual Rate of Increase	
	Males	Females	Males	Females
(1)	(2)	(3)	(4)	(5)
1	22.15%	19.60%	26.40%	23.85%

7	1.65%	1.40%	5.90%	5.65%
8	1.50%	1.35%	5.75%	5.60%
9	1.25%	1.25%	5.50%	5.50%
10	1.05%	1.15%	5.30%	5.40%
11-19	0.65%	0.50%	4.90%	4.75%
20 or more	0.00%	0.00%	4.25%	4.25%

This weighted average projected salary increase rate is 6.46% based on the active member service distribution as of August 31, 2005.

**DISABILITY ANNUITANTS:**

1. Investment Return Rate: 8% per annum, compounded annually.
2. Mortality: The PBGC Male Disabled Mortality Table for plan terminations after December 1, 1980, with a six-year setback and the PBGC Female Disabled Mortality Table for plan terminations after December 1, 1980, with a four-year setback.

**SERVICE RETIREMENT ANNUITANTS, NOMINEES AND SURVIVORS:**

1. Investment Return Rate: 8% per annum, compounded annually (benefit increase reserve account eliminated by the 1995 legislative session).
2. Mortality: RP-2000 Male Mortality Table with a one-year setback and the RP-2000 Female Mortality Table with a two-year setback; used for service retirement annuitants, beneficiaries and survivors. These tables are selected to best reflect the experience developed in the actuarial investigation as of August 31, 2003.

**ERS/TRS TRANSFER ASSUMPTIONS:**

A liability for the present value of the potential asset transfer has been calculated assuming that the TRS members who will be eligible for the transfer benefit are approximated by 10% of the inactive TRS members who have at least five years of service and have left their contributions on deposit. The liability is based on the actuarial present value of the deferred benefit assuming future salary increases at the current salary scale rates and that they will retire at the earliest age for which an unreduced benefit will be received.

**HANDLING OF ACTIVE DATA WITH MISSING INFORMATION:**

As of the close of each fiscal year there is a large number of records for whom no statistical data has been received. The only information TRS has is social security number and initial contributions. Any of these records that were in the prior year's data are treated as non-vested terminated members. The remaining records are treated as new entrants. Beginning with the valuation as of August 31, 1993, active member results have been imputed for this new entrant error group according to the following procedures:

1. The count for this group has been added to the active member count.
2. Covered payroll and the present value of future pay have been increased by the product of the number of such members multiplied by average new entrant pay and present value of future pay.
3. The present value of future benefits for active members has been increased by the product of the new entrant normal cost rate multiplied by the imputed present value of future pay for this group, as determined under Item 2 above.

There are other records provided by TRS that have missing gender and/or missing date of births. These records are handled as follows:

1. 80% of records with missing gender are assumed to be female. The overall male female ratio of the active membership is used to set this assumption.
2. Records with missing dates of birth are assigned a date of birth that produces an entry age equal to the average entry age for the overall active population, based on the member's actual service.

**ASSUMPTION FOR DROP PARTICIPATION**

It is assumed that no members will enter DROP.

**BENEFIT ELECTION OF VESTED TERMINATING MEMBERS:**

In determining the liabilities developed for future terminating vested members, it is assumed that the member elects either a refund or a deferred vested benefit, whichever is more valuable. The deferred benefit is assumed to commence at age 65.

**ELECTION RATES FOR ACTIVE MEMBER DEATH BENEFITS:**

It is assumed that the beneficiary will elect the death benefit option with the greatest value.

**CLASSIFICATION OF WHO ARE ACTIVE MEMBERS:**

For members who had no contribution postings during the just-completed plan year but did have a posting during one or more of the four preceding plan years:

1. 10% of such members will be assumed to return to contributing status in the new plan year (i.e., they will be assumed to be active for valuation purposes).
2. 90% of such members will be treated as inactives for the new plan year.
3. The 90% group will be valued as inactive vested or inactive nonvested depending on their years of service credit.
4. If they are considered inactive vested, their actuarial liability will be the present value of their accrued benefit assuming benefit commencement at age 65, plus the value of any death benefit.
5. If they are considered inactive nonvested, their actuarial liability will be their accumulated account balance.

**AVERAGE SURVIVOR BENEFIT LIABILITY:**

One of the options on the death of an active member, a disabled member, or a retired member is a survivor benefit. To determine the liability for this benefit the following average values are used.

	<u>Males</u>	<u>Females</u>
1. Active member	\$62,200	\$59,000
2. Disabled member	\$13,000	\$11,000
3. Retired member	\$12,000	\$12,000

**ACTUARIAL VALUE OF ASSETS:**

The actuarial value of assets is equal to the market value of assets less a five-year phase in of the excess (shortfall) between expected investment return and actual income with the resulting value not being less than 80% or more than 120% of the market value of assets.

**PAYROLL GROWTH FOR FUNDING OF UNFUNDED ACTUARIAL ACCRUED LIABILITY:**

1. Total payroll growth rate: 3.00%.
2. Portion attributable to inflation: 3.00%.
3. Portion attributable to active member growth: No growth.

**ACTUARIAL COST METHOD:**

The funding period required to amortize the unfunded actuarial accrued liability (UAAL) is determined using the Entry Age Actuarial Cost Method. This method assigns the plan's total unfunded liabilities (the actuarial present value of future benefits less the actuarial value of assets) to various periods. The unfunded actuarial accrued liability is assigned to years prior to the valuation, and the normal cost is assigned to the year following the valuation. The remaining costs are assigned to future years.

The normal cost is determined as a level percentage of payroll for a group of new entrants, based on actual new entrant experience for the period 2000-2003. This percentage of payroll is then applied to the total compensation for the prior year for all active members, and is then adjusted for the payroll growth assumption.

The actuarial accrued liability is the difference between the total present value of future benefits and the actuarial present value of future normal costs. The unfunded actuarial accrued liability (UAAL) is the excess of the actuarial accrued liability over the actuarial value of assets.

Since the State statutes governing the System establish the current employee and State contribution rates, the actuarial valuation determines the number of years required to amortize (or fund) the UAAL on a level percentage of payroll basis, taking into account the payroll growth assumption and the normal cost expressed as a percent of pay.

Because of this amortization procedure, any change in the unfunded actuarial accrued liability due to (i) actuarial gains and losses, (ii) changes in actuarial assumptions, or (iii) amendments, affects the funding period. The statutory goal is that the State contribution rate be sufficient to keep the funding period below 31 years.

**FUNDING OF UNFUNDED ACTUARIAL ACCRUED LIABILITY:**

Funded by the excess of future State contributions required by Law over the amount of such contributions required to fund the normal cost of benefits. Based on a study of all new entrants hired in the period from 1999 through 2003 and taking into account all changes in benefit provisions, the normal cost for benefits provided by the System is 10.40% of payroll (6.40% by members plus 4.00% by the State), which is 2.00% of payroll less than the total contributions required by Law. It is intended that the excess amount of 2.00% of payroll will be used to amortize any unfunded actuarial accrued liabilities of the System, assuming that total payroll increases by 3.00% per year.

As of the valuation as of August 31, 2005, these excess contributions of 2.00% of pay are not sufficient to amortized the UAAL over any period of time. Therefore, the funding period for the System is considered never. Future funding of the UAAL will be dependent on either the generation of actuarial experience gains or an increase in the State and/or member contribution rates.

## DEFINITION OF ACTUARIAL TERMS

H.B. 2206 as passed by the 1979 Legislature requires that any actuarial study of a public retirement system include "a complete definition of each actuarial term used in the study". In our report we have attempted to avoid the use of a multitude of complex actuarial terminology, but we realize that different users of our reports may have differing opinions as to what constitutes an "actuarial term".

Accordingly, in keeping with the intent and the spirit of the law, we offer the following definitions of several terms contained in this report which might be considered actuarial in nature. Any qualified user of our report who believes that additional terms should be included is invited to communicate such terms either directly to us or through the Teacher Retirement System of Texas.

1. *Actuarial Accrued Liability* - for benefits payable in the future to present members, it will equal the present value of benefits payable in the future to them less the present value of future normal costs.
2. *Actuarial Assumptions* - assumptions as to future experience under the System. Current actuarial assumptions are detailed in Table 21 of the current annual valuation report. Assumptions include future fund earning rates, rates of future salary increases, and rates of death (both before and after retirement), disability, retirement, and withdrawal. Effective August 31, 1985, select and ultimate assumptions were adopted for retirement and withdrawal rates and the salary scale.
3. *Actuarial Gain or Actuarial Loss* - a measure of the difference between actual experience and assumed experience of the System. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, actuarial liabilities emerge which may be the same as forecasted, or they may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., the System's assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results that produce actuarial liabilities which are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.
4. *Actuarial Liabilities* - the actuarially determined present value of future benefits to be provided by the System. There are separate actuarially determined present values for retired members and non-retired members (either active or inactive). When applied to active members, it takes into account benefits which will be earned through future service and future salary increases.
5. *Actuarial Value of Present Assets* - the value of present System assets for valuation purposes. Prior to August 31, 1985, this value was the same as the book value of assets. Beginning

August 31, 1985, through August 31, 1993, this value was calculated under the “market over book adjusted asset valuation method.” Beginning August 31, 1993, this value is calculated under a five-year phase in of the excess (shortfall) between expected and actual income return on the market value of assets.

6. *Actuarially Determined* - values which have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.
7. *Actuarially Sound* - a condition existing when the unfunded actuarial accrued liability can reasonably be expected to be funded or amortized over a determinable number of years. Such funding or amortization is accomplished as a result of the excess of total contributions over the normal cost of expected benefits. The Teacher Retirement System of Texas is considered actuarially sound as long as the length of time required to fund the unfunded actuarially accrued liability does not exceed 31 years.
8. *Decrement*s - those types of activities by members of the System which cause them no longer to be members, i.e., death, retirement, disability, and withdrawal. It is a general term referring to any or all of these membership terminating events.
9. *Defined Benefits* - in a retirement plan, benefits which are defined by a specific formula applied to specific member compensation and/or specific years of service. The amount of the benefit is not a function of contributions or actual earnings on those contributions.
10. *Defined Contributions* - in a retirement plan, periodic contributions to the plan which are defined as a specific percent of compensation.
11. *Experience Study* - a periodic review and analysis of the actual experience of the System which may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.
12. *Funding Period* - the number of years in the future that will be required to fund (i.e., pay off or eliminate) the unfunded actuarial accrued liability, based on the actuarial assumptions and assuming no future actuarial gains or losses.
13. *Future Benefits* - benefits specified in the law which will become payable at some time in the future when the member satisfies the requirement to receive such benefits.
14. *Future Contributions* - contributions to be made by the member or the State in the future, as required by the law.

15. *Normal Cost* - the actuarial cost to fund the benefits provided by the System were the funding to begin at date of hire. It is expressed as a percent of pay and is equal to the present value at hire of all possible benefits of the System divided by the present value of anticipated future compensation to be received by the new member. In the aggregate, it must be less than the total future contribution to the System if the unfunded actuarial accrued liability is to be amortized. Otherwise there must be a funding surplus sufficient in size to offset any contribution rate shortfall.
16. *Present Value* - the actuarially determined lump sum value as of the valuation date of a series of payments to be made in the future, where the lump sum value is equal to the sum of the discounted value of each future payment. The discounted value of each payment is the product of (a) the amount of the payment, (b) the probability that the payment will be made (based on the current actuarial assumptions as to future experience), and (c) the time value of money (based on the current assumed interest rate).
17. *Unfunded Actuarial Accrued Liability* - that portion of the actuarial accrued liability (including the present value of benefits presently being paid to retired members) that exceeds the value of current actuarial assets. A funding surplus exists if the actuarial accrued liability is less than the actuarial assets.
